

METAmessage[®] for Wireless

**Handheld access
to the enterprise**

BASIC

"If your shop supports BlackBerries or other text-messaging services, you need METAmessage — and you need it today!"

InfoWorld

Ensure that all your communications appear professional and typo-free — check spelling the same way you would proof a Word document.

Print anywhere — to a convenient fax machine at your hotel or airport lounge, or to a network printer elsewhere in the building or at a satellite office.

Set custom alerts to ensure notification when you receive important messages. Set notification preferences based on either the Sender: or Subject: in received email.

METAmessage[®] — an important part of every BlackBerry[®] deployment

- **Spell check** outgoing messages in your language
- **Print anywhere** — network printers or any fax machine
- **Set custom message alerts**
- **Access documents** on your network to read, print, or send

METAmessage Basic provides essential features for every handheld user. By expanding handheld capabilities, METAmessage decreases reliance on laptops and dialup connections, making important corporate data — not just email — accessible and manageable anywhere, anytime. METAmessage offers administrator-configurable capabilities that are appropriate for any enterprise — from a law firm requiring access to a time-and-billing database to a government office requiring document storage with the strictest security and reliability.

METAMessage for Wireless

The METAMessage server's scalable, open architecture lets enterprises leverage existing messaging infrastructure — and, it provides a dependable platform for future growth. The METAMessage solution lets you easily add capabilities as your needs and messaging technology evolve.

METAMessage for Wireless fits every enterprise — whether you need a basic feature set or advanced data access capabilities, an economical solution is available. And, all functionality is under complete control of the administrator — you can provide different services on a user-by-user basis. And, METAMessage lets you either take advantage of RIM's Mobile Data Service or use email transport.

- Operates behind the firewall on an NT/2000/2003 server supporting Microsoft Exchange and Lotus Domino environments. A client application offers a quick-and-easy user interface on a handheld device.
- Setup wizards get you up-and-running quickly, with fast user-list imports from Exchange global address lists (GAL) and Domino address books.
- Automatically updates and synchronizes user lists.
- Requires Windows NT 4.0/2000/2003, 1GHz CPU, 512MB RAM.

Spell check outgoing messages

Send professional, mistake-free messages in several languages. By spell-checking outbound email messages, METAMessage ensures a crafted, edited appearance to all your correspondence. Everyone needs this feature on a handheld!

- Find and replace errors with the click of the trackwheel.
- Use personal or corporate word lists.
- Supported languages – English, German, French, Spanish, Italian, Dutch.

Set custom message alerts

Custom message alerts let you set notification rules in order to differentiate messages from different senders or with different subjects. For example, you can set alerts so that any message from a central-command or supervisor's email or PIN address or any message with "Urgent" in the Subject: line appears as a popup window with an audible tune.

Print anywhere, including network printers

Print important documents, messages, and attachments anywhere from your handheld — to a network printer when you're away from your desk or at a remote office, or to a convenient fax machine when you're anywhere else. Find a shared printer on your network with a simple search command — or, browse for a special printer for slides, color presentations, or oversize documents. You don't have to memorize long path names, and your IT group doesn't have to specially configure selected printers and then generate, distribute, and update printer lists.

- Converts all popular file formats — including documents, spreadsheets, images (.bmp, .gif, .jpg), and slides.
- Print Office files with their original, rich text format (RTF) intact to both network printers and fax machines.

Read, Get contact information

METAMessage lets you read virtually any type of file on your handheld with advanced viewing features and intact formatting. And, you have complete access to your corporate address books!

- Read Excel spreadsheets intelligently — access multiple sheets, freeze panes, adjust cell size, copy cell content, and navigate with both *Find* and *Go to Cell* commands as well as with scrollbars sized relative to the length of the spreadsheet.
- Navigate through a long Word document via the table of contents.
- Quickly find and update PIN addresses, email addresses and phone numbers with Exchange global address list (GAL) and Domino address book lookup.

Access documents on your network

Securely access files that are located on your corporate network. Imagine meeting a sales prospect while on the road and immediately emailing a brochure or presentation from your handheld!

Document access lets you navigate through computers, folders, and files to which you have share privileges with an Explorer-like user interface to read, print, or send files with just your handheld.

Using your Windows logon credentials, METAMessage Basic allows you access to all the directories and file shares that you can from your office PC. With METAMessage Basic's advanced file conversion features you will be able to read virtually any file format on your handheld in easy to read, rich-text layout.

METAMessage Legal, Data, Emergency Communications, and Voice solutions

METAMessage, active at over 1000 enterprises with over 100,000 users, is a complete, out-of-the-box solution for BlackBerry handheld access to the enterprise.

- *Legal* — Access document management systems (Interwoven, ...); enter time-and-billing stats (Carpe Diem, ...); and retrieve client info and matters (InterAction, ...).
- *Data* — METAMessage delivers quick, easy-to-implement solutions that provide handheld access to virtually any data source — including enterprise apps, databases, and doc management systems.

- *Emergency Communications* — Enable effective Continuity of Operations (COOP) and emergency response (ER) planning with PIN-to-PIN features, message blasting, PIN-to-PIN/SMS archiving, handheld document storage, and the Emergency Gateway.
- *Voice* — Bring "always on, always connected®" convenience to voicemail access via a user's BlackBerry handheld, whether it is phone enabled or not.
