

METAmessage[®] for Wireless

**Handheld access
to the enterprise**

LEGAL

"If your shop supports BlackBerries or other text-messaging services, you need METAmessage — and you need it today!"

InfoWorld

Maximize revenues by never losing a billable minute. METAmessage supports all popular time and billing applications.

Optimize relationships by tracking client matters and quickly accessing profiles, notes, and activities.

The solution chosen by over 150 law firms (40+ in AmLaw 100) including:

Dewey Ballantine, Mintz Levin, Ropes & Gray, Palmer & Dodge, Womble, Carlyle... and many more.

Use BlackBerry[®] handhelds to:

- Enter **time and billing** stats (Carpe Diem, ...)
- Access **document management** systems to read, print, and send (WorkSite, ...)
- Retrieve client info, matters from **CRM** apps (InterAction, ...)
- **Spell-check** outgoing messages

METAmessage for Wireless — Legal is an integral part of every law firm's wireless deployment. Flexible, scalable, and economical, it frees mobile attorneys from laptops and dialup connections and makes vital data available anywhere, anytime.

The Problem

You've implemented a handheld solution, however —

- You're losing revenue from unbilled time;
- Attorneys can't get their documents at client sites or in court;
- Spelling errors abound in handheld correspondence to clients;
- Case and contract details are unavailable to attorneys out of the office; and,
- Support staff is tied up relaying client matters and contact information.

The Solution

METAmessagE for Wireless — Legal is an integral part of every law firm's BlackBerry deployment. It takes handhelds beyond email and gives attorneys full access to the enterprise.

- | | |
|-------------------------|--|
| Time and Billing | Maximize revenues by never losing a billable minute. Jumping in a taxi after a client visit, an attorney can immediately update client time with a few clicks on their handheld. |
| Doc Management | Quickly access contracts, briefs, or any file located in document management programs. Attorneys can search through a document on their handheld, print the document on any fax machine or network printer, or send the file to a client or colleague. |
| CRM | Optimize relationships by tracking client matters and quickly accessing profiles, notes, and activities. By interacting with CRM software, METAmessagE delivers needed data wherever and whenever it's needed. |
| Spell Checking | Send professional, mistake-free messages. By spell-checking outbound email messages, METAmessagE ensures a crafted, edited appearance to client correspondence. |

Features

METAmessagE for Wireless — Legal solutions include:

- Data Access* — Interact with doc management, time-and-billing, and research apps & services — without launching a browser.
- Spell Checking* — Find and replace errors with the click of the trackwheel — and, use your personal word list.
- Message Alerts* — Set notification rules in order to differentiate messages from different senders or with different subjects.
- Document Access* — Access documents located on your network to read, print, or send.
- Contact Info* — Find email addresses and phone numbers with GAL and Domino address book lookup.

Technical Info

- Scalable, open architecture leverages existing messaging infrastructure — a dependable platform for future growth.
- Operates behind the firewall on a Windows NT/2000/2003 server supporting Microsoft Exchange and Lotus Domino environments.
- Setup wizards get you up-and-running quickly, with fast user-list imports from Exchange global address lists (GAL) and Domino address books.
- Store-and-forward model means users don't lose data when wireless coverage fluctuates.
- Can use either email transport or the Mobile Data Service of the BlackBerry Enterprise Server.
- Automatically updates and synchronizes user lists.
- Connects to virtually any doc management system, time-and-billing application, and research service via Onset and Tibco™ connectors.
- Requires Windows NT 4.0/2000/2003, 1GHz CPU, 512MB RAM.
